

A step-by-step guide to embed videos from YouTube and other helpful strategies

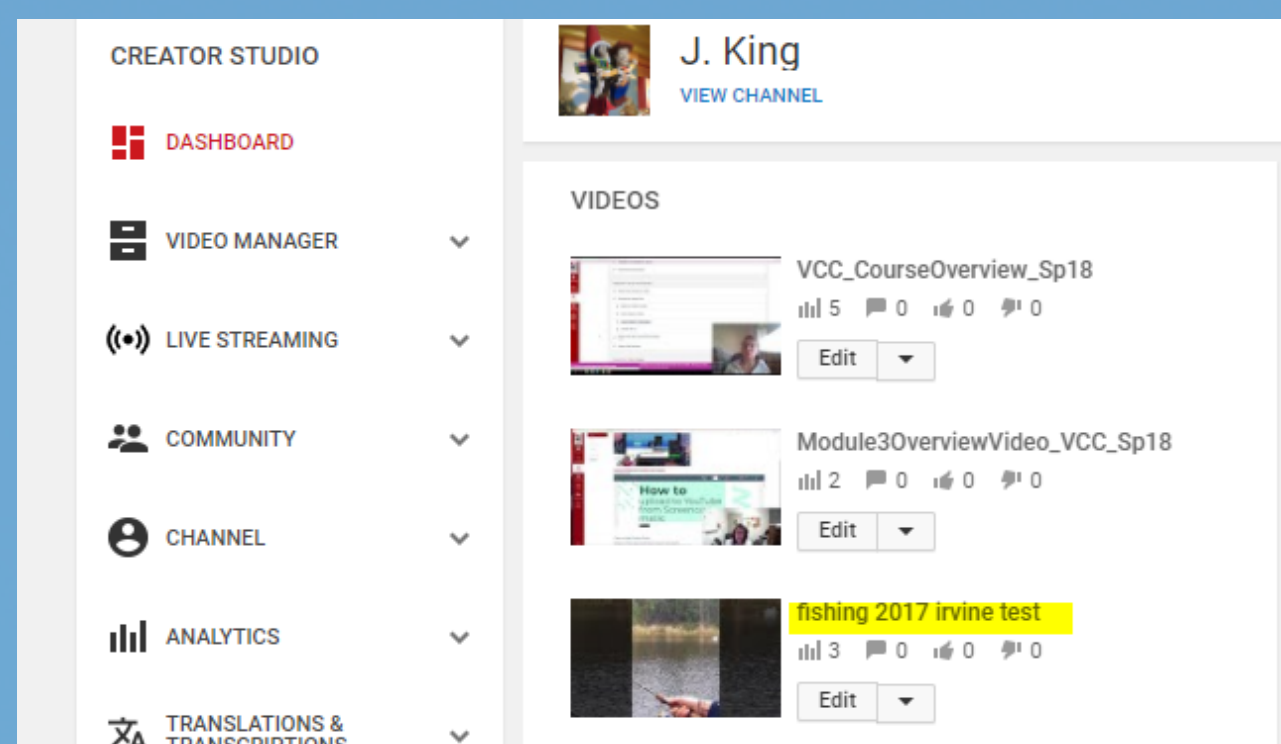

Embedding your YouTube Video

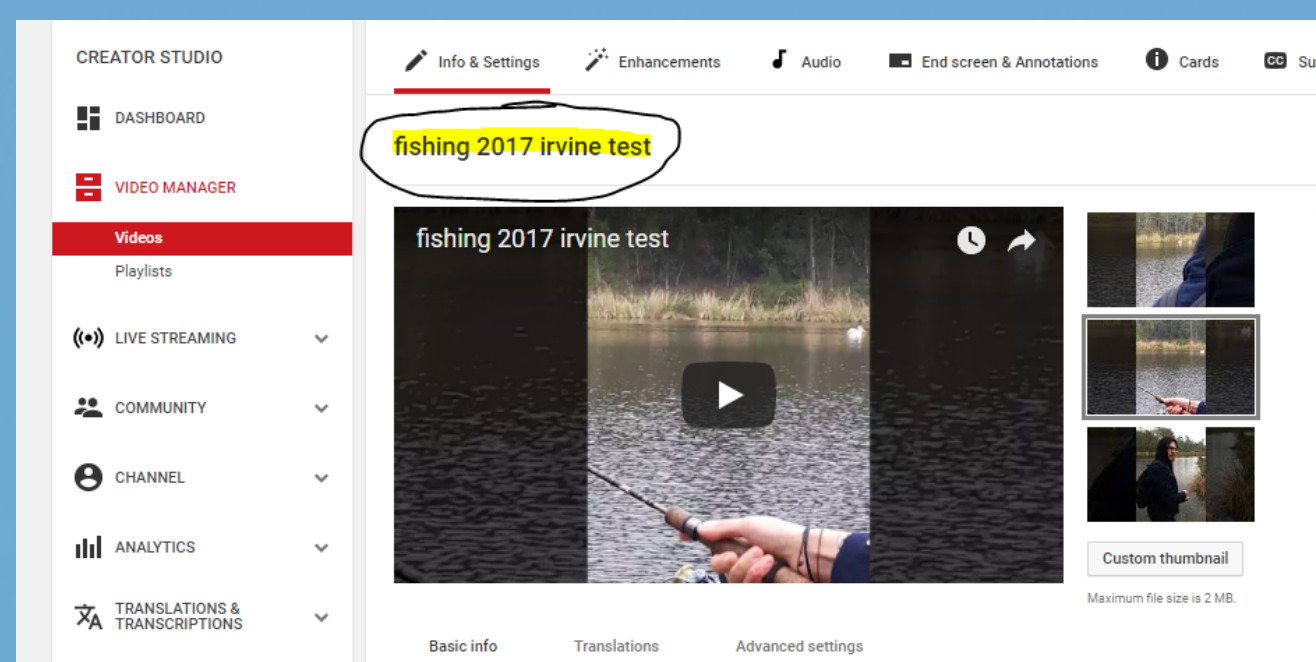

1. Go to YouTube's website and log in.

2. Find the video you wish to add to Canvas

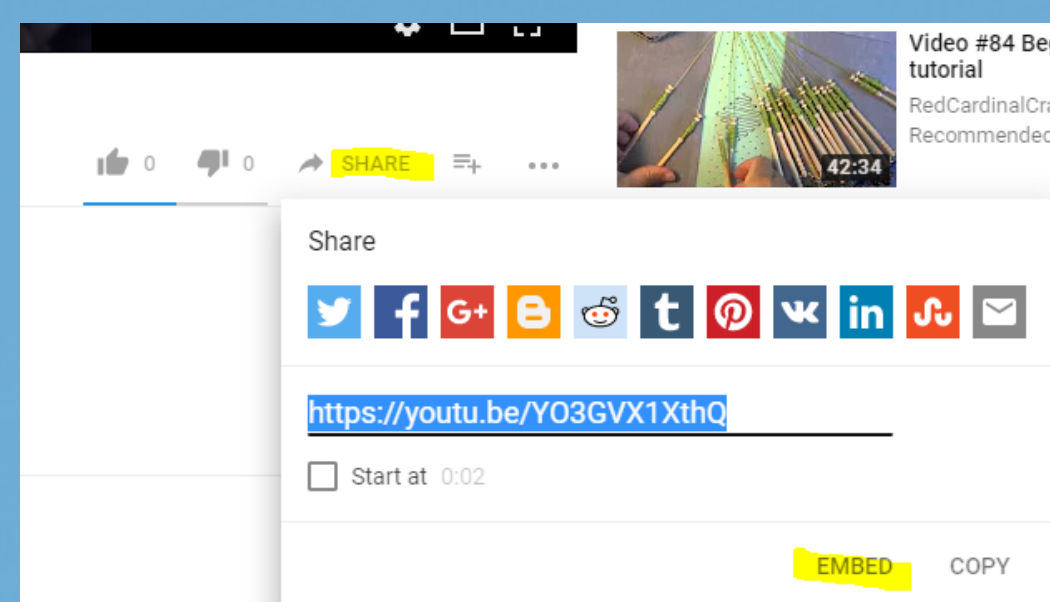

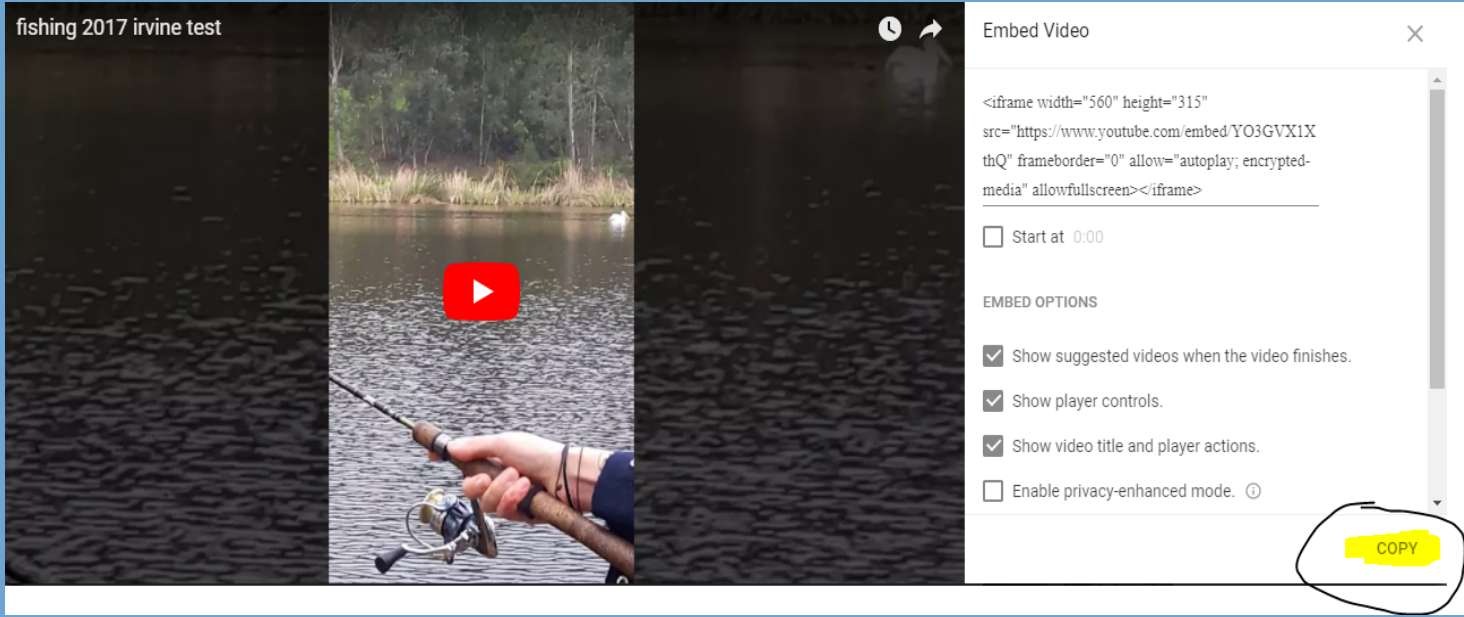

3. Click on the title of the video you wish to embed

4. Next, click "share" then "Embed"

The "share" link is located at the bottom right hand of the video

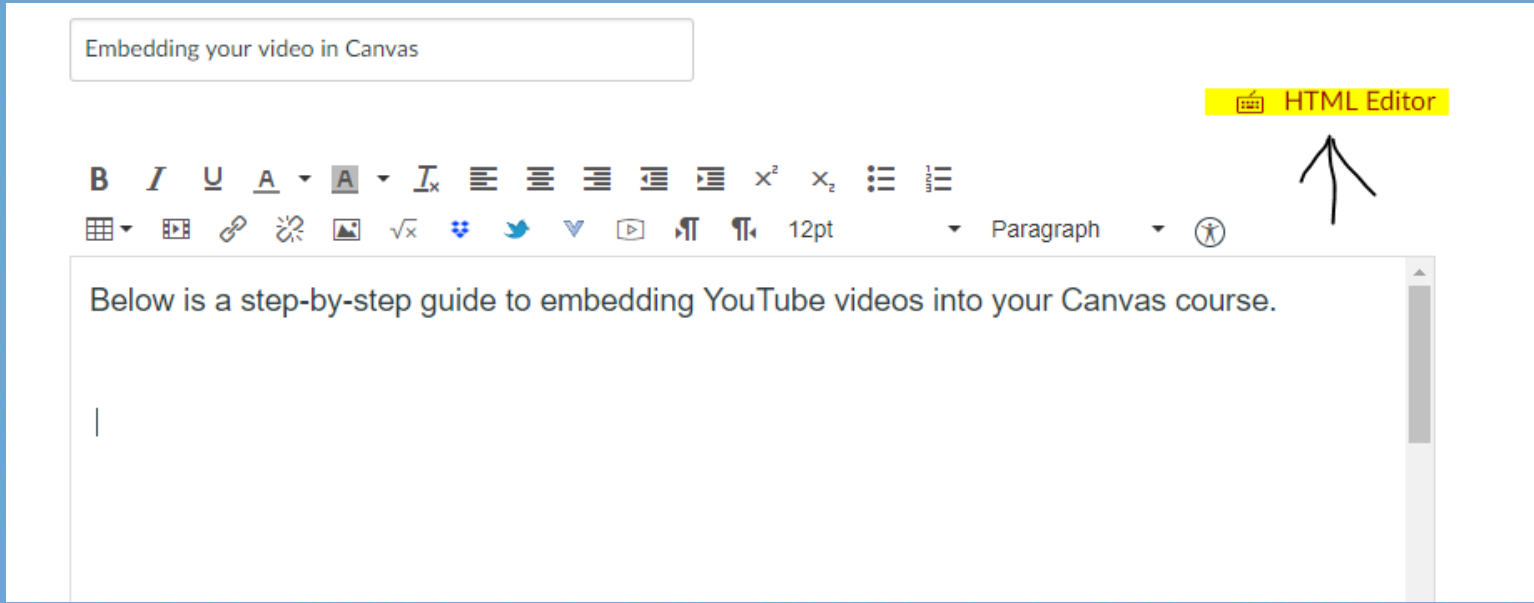

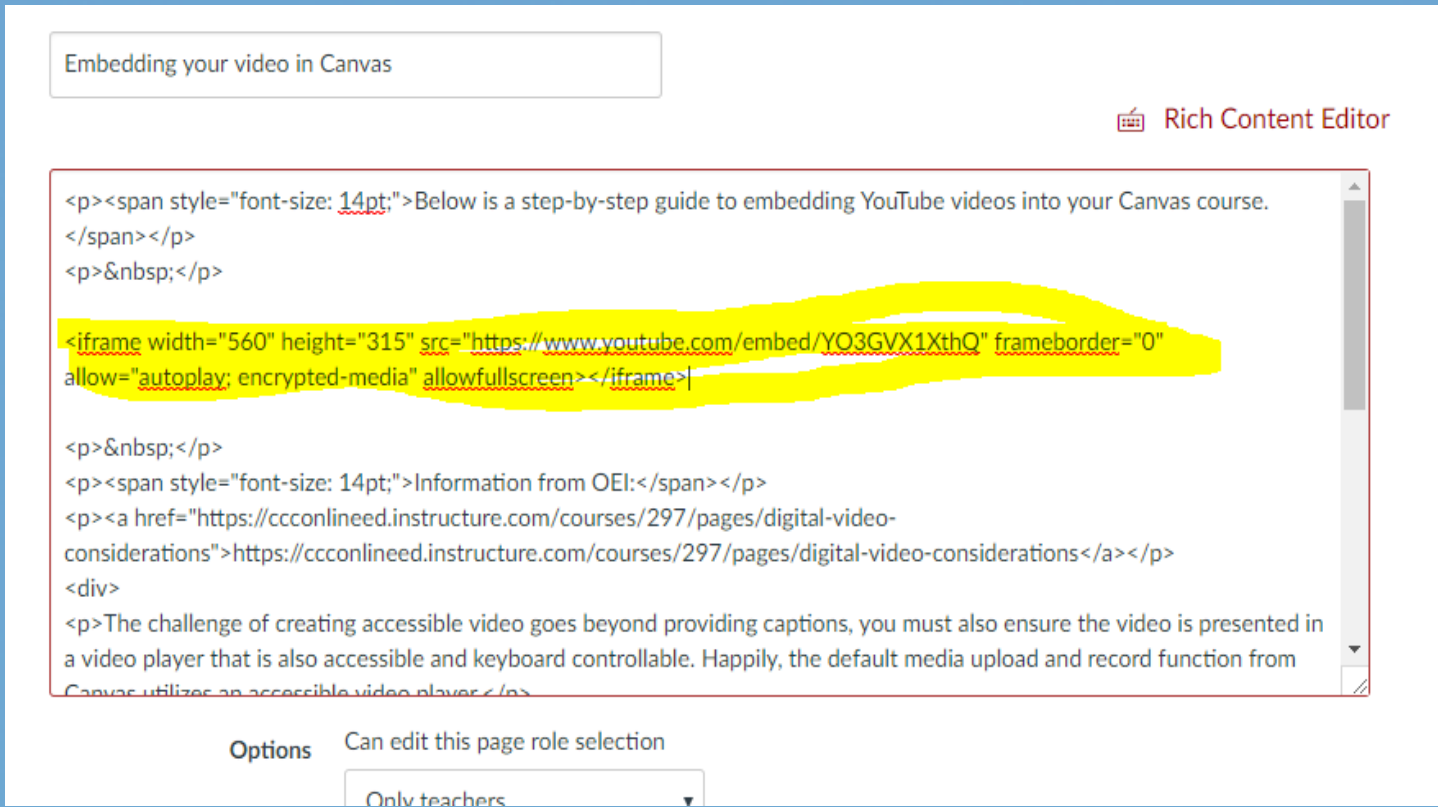

5. Another screen will pop up with the embed code. Click the "Copy" link to copy the embed code.

Next:

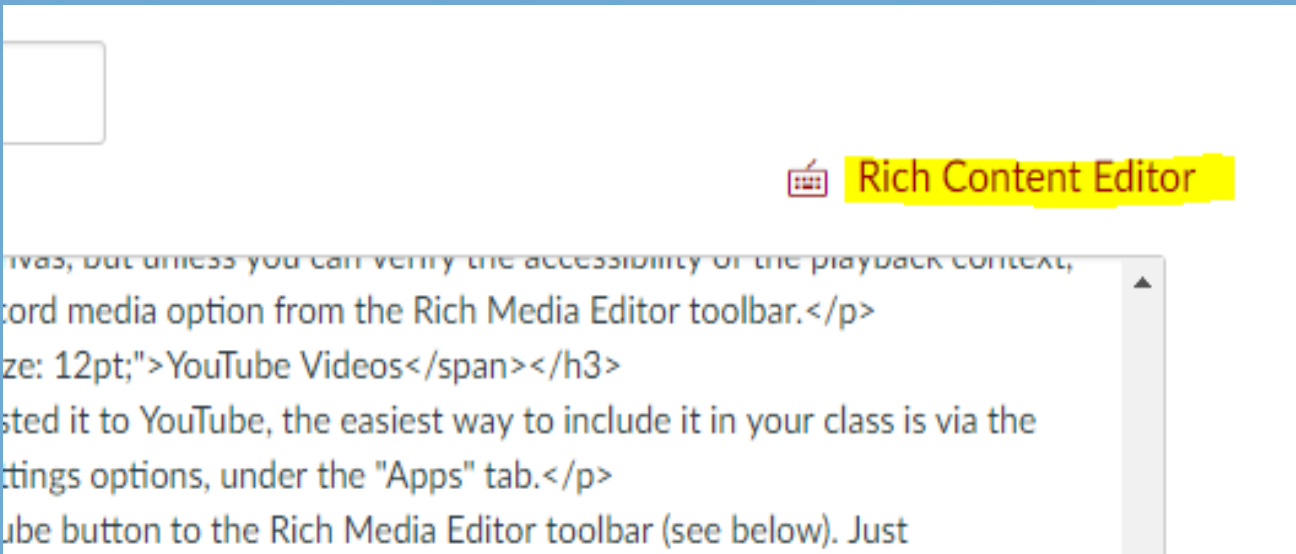

Go to Canvas and open the page, quiz, or assignment that you'd like to embed the video in

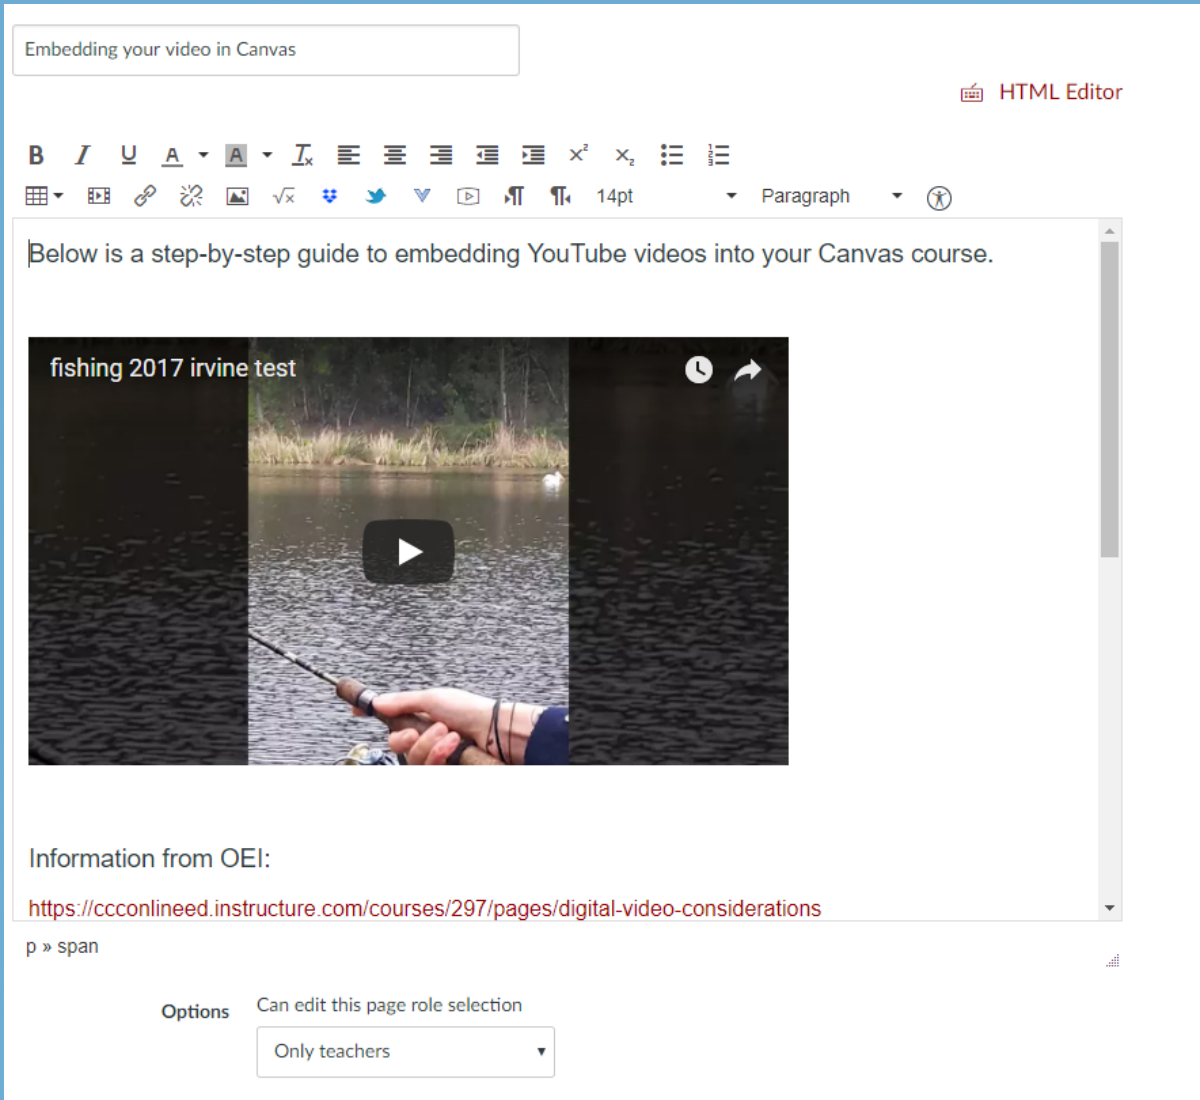

6. Once you are at the page you'd like to embed, click on EDIT to add information to the page and the "HTML Editor"

7. Find the area you'd like the video to be placed (pasted). If you are unfamiliar with HTML, place the video embed code at the very top of the page. I added mine in between some text and paragraph breaks

8. Next, either click back to the "Rich Content Editor" or press, "Save" to see the embedded video

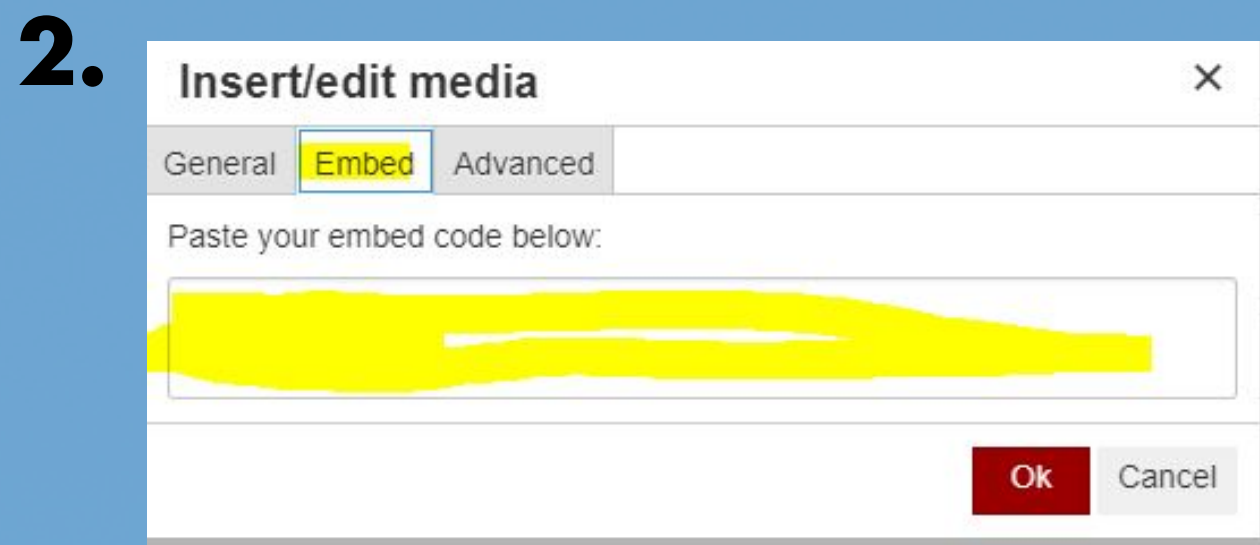

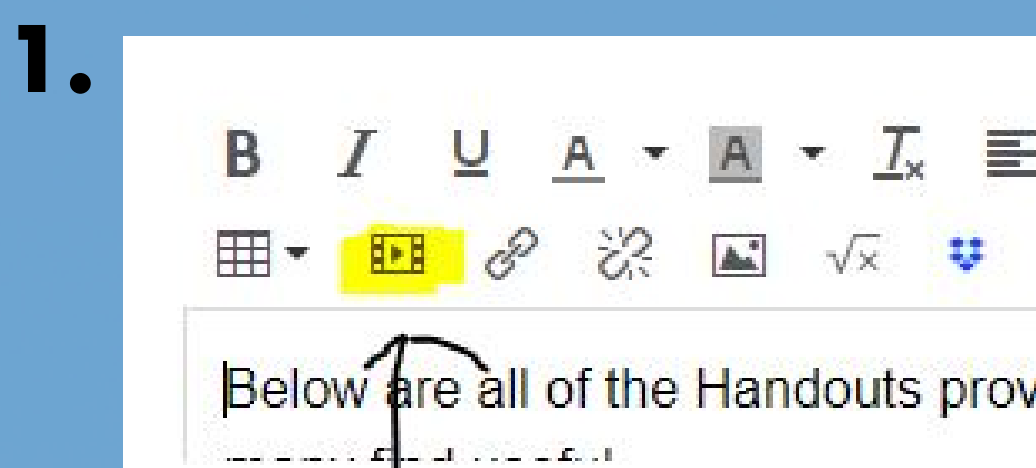

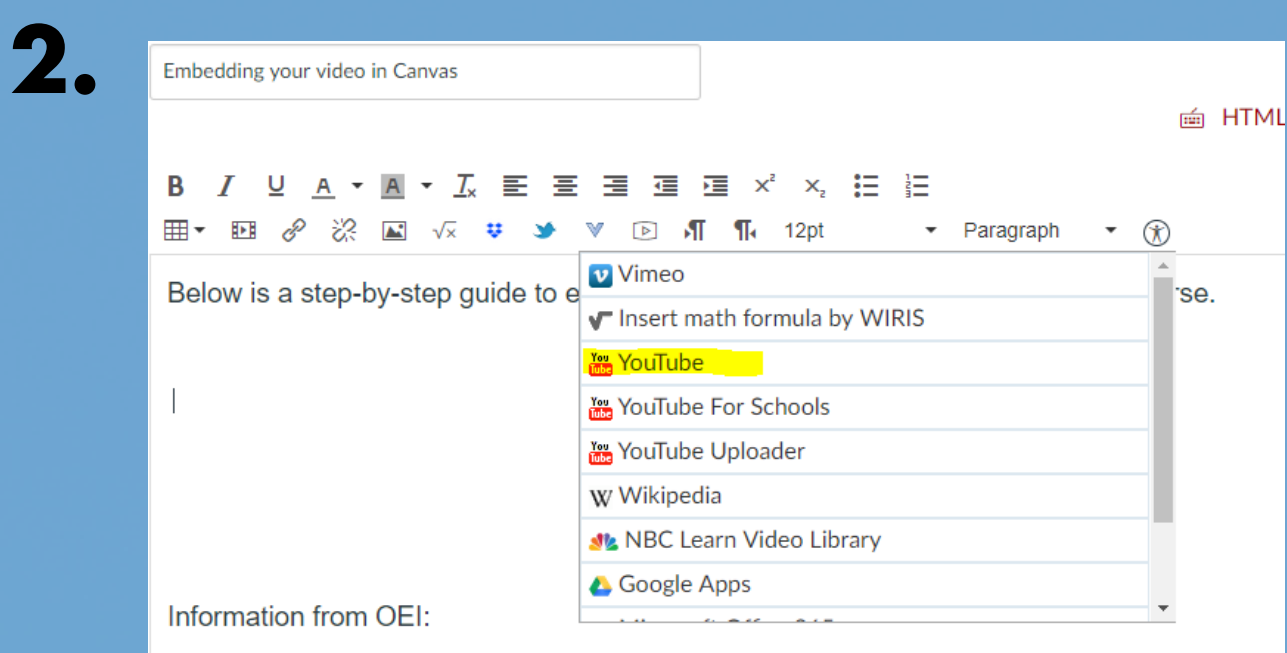

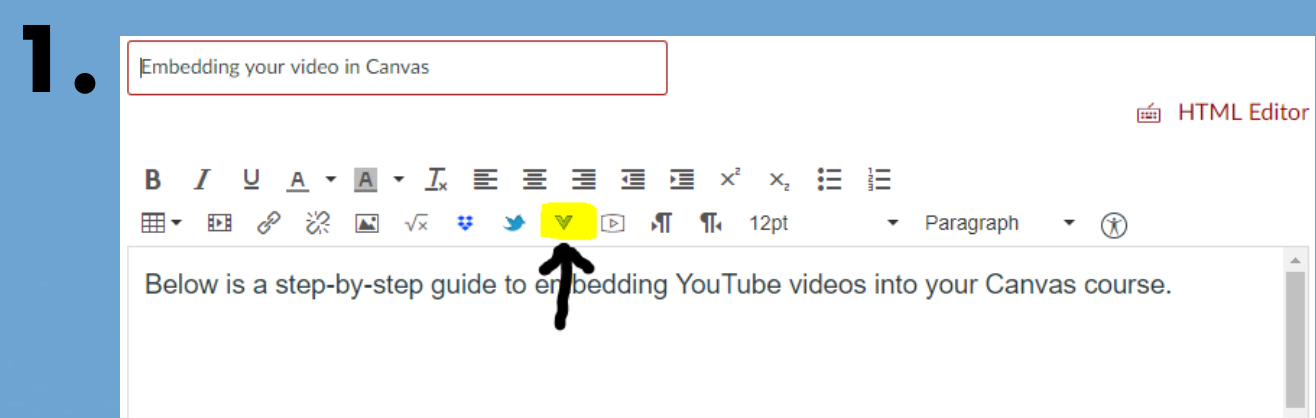

You should be able to see your video now embedded in your canvas page.

The student should be able to click on the title of the video to see the video in YouTube, play the video within the Canvas page, or make the video full screen.

You can also SEARCH for YouTube videos within Canvas or add them with the Insert/Edit media function in the Rich Text Toolbar

OR

Note: If your video is private or unlisted, searching for your video may not be possible. You will need to embed or provide your students with a link
